

## PORTABLE, EMERGENCY AND TEMPORARY HEATING & AIR CONDITIONING INDUSTRIAL FANS

### Industrial Fans - All Sizes

Air Systems provides many different types and sizes of fans and air circulators. If you need a fan we have it. Air Systems is set up to deliver equipment immediately upon your call. The fans are both mobile on casters and handle carried. They are delivered to the job site, placed and positioned and test run prior to job start up. The fans are readily moved from space to space.

Some are large box fans, some are large and small round barrel and some are square and some are circular pedestal types. We have all sizes needed for any job. From large open warehouses to long hallways, multistory buildings, offices and server rooms. Fans are often used in conjunction with portable a/c, heating, filtration, humidification and dehumidification equipment. Our equipment is able to be ducted in or out or used in a recirculation capacity. Some units are two speed some are direct connect. We can provide sufficient air movement for all applications in any situation.

Our fans are used in every application of facilities maintenance and support. They are often used in combination with other equipment to provide proper building air flow and comfort.

- **Voltage:** 120v/1ph-208v/1-3ph-480v3Ph
- **Amps:** 1-12
- **Height:** 12-72"
- **Width:** 12-72"
- **Depth:** 8-40"
- **Weight:** 5-125#
- **Oper. Range:** -20 deg. F - 185 deg. F

**Built in controls on various equipment include:**

Auto run, manual run, variable speed, units on casters, ducted, Filtration- Merv 7-11, construction capacity

**Applications include:**

Construction, Process application, Tenant improvement, Sheet Rock, Flood, Mold, Remodel
